

Pre-Activity SQL Game

This activity primes students to understand the concept of querying and has students physically moving.

"Human SQL" Game to Get Students Excited about Using SQL

This mimics SQL clauses such as SELECT, WHERE, ORDER BY, and AND using the students themselves as the data to query.

The Game

Have the whole class stand up at one end of the room. They will be sitting down if they are not “queried”.

The Clauses

Below is an example of the types of clauses you can use to “filter” the students in the room.

Instructor Says	Students Action
" SELECT * FROM Class WHERE shoes = 'White'"	All students with white shoes stay standing; others sit.
" AND hair_length = 'Long'"	Of those standing, only those with long hair stay standing up.
" ORDER BY height DESC "	The remaining students line up from tallest to shortest.

The Bridge

Explain to the students that they are about to do this same thing to find a killer in a city of thousands of people.
